

Glassed in meeting room within open plan area

Board room with unique wood panelled ceiling

Reception area and foyer next to board room

Open plan office area

CBUS is the industry superannuation fund for the construction, building, infrastructure and allied industries. CBUS' Trustee approached Soundmask seeking a solution to speech privacy and noise problems in its head office. The primary issues were within the board room and meeting rooms within the open plan area, where private conversations were clearly audible from outside. Further, the open plan office area was filled with distracting noise, which can decrease staff productivity and increase workplace stress and health problems.

Soundmask installed a Soundmask system that reached throughout the entire level, solving CBUS' speech privacy problems and ensuring that CBUS minimises its workers' noise-related stress levels.
